

INDEX

Section 1: JavaScript Fundamentals

Basics and Variables

Data Types

Type Conversion & Coercion

Operators and Expressions

Control Flow (if, switch, loops)

Section 2: Functions and Scope

Function Declarations & Expressions

Arrow Functions

Parameters & Arguments

Scope & Lexical Scope

Closures

IIFE (Immediately Invoked Function Expressions)

Section 3: Objects and Prototypes

Object Creation

Object Methods and `this`

Property Descriptors

Prototypes & Inheritance

Classes and ES6 Class Syntax

Object Immutability (`freeze` , `seal`)

Deep vs Shallow Copying

Section 4: Advanced Function Behavior

Hoisting

Execution Context

The `this` Keyword

Call, Apply, Bind

Currying & Partial Application

Temporal Dead Zone and Function Context

Section 5: Arrays and Iteration

Array Methods (map, filter, reduce, etc.)

Iterators & Generators

Spread, Rest, and Destructuring

Array Performance & Optimization

Custom Iterators

Section 6: Asynchronous JavaScript

Callbacks

Promises

Async/Await

Event Loop and Task Queues

Microtasks vs Macrotasks

Promise.all, Promise.any, Promise.allSettled

AbortController and Cancellation Patterns

Section 7: Events and the DOM

DOM Manipulation

Event Handling

Event Propagation (Capturing, Target, Bubbling)

Event Delegation

Custom Events

Shadow DOM

Passive Listeners & Performance Optimization

Section 8: Advanced Objects and Memory

Maps, Sets, WeakMaps, WeakSets

Proxies and Reflect API

Memory Management & Garbage Collection

Memory Leaks in Closures

Serialization (`JSON.stringify` limits)

Section 9: Advanced Browser and Web APIs

Fetch API

Web Storage (localStorage, sessionStorage)

IndexedDB & Cache API

CORS and Preflight Requests

Debouncing, Throttling, requestAnimationFrame

Web Workers & Service Workers

Background Sync and Offline Strategies

Section 10: ES6+ and Modern JS

ES6 Syntax

Modules and Imports

Optional Chaining & Nullish Coalescing

Symbols and Well-known Symbols

Template Literals and Tagged Templates

Top-Level Await

Logical Assignment Operators

Array.at, Object.hasOwn

Temporal API (Proposed)

Section 11: Patterns and Architecture

Functional Programming
Module Pattern
Observer/EventEmitter Pattern
Factory, Singleton, and Revealing Module Pattern
Decorator, Adapter, and Strategy Patterns
Proxy & Middleware Design Patterns

Section 12: Testing, Security, and Optimization

Error Handling
Performance Optimization
Common Pitfalls and Best Practices
Testing (Unit, Integration, E2E)
Security Basics (XSS, CSRF, CSP, Trusted Types)
Web Vitals (LCP, CLS, INP)

Section 13: TypeScript and Static Typing

Type Inference and Annotations
Interfaces and Type Aliases
Generics and Utility Types
Union, Intersection, and Literal Types
Decorators and Metadata
Structural Typing
Integration with React, Node, and Build Tools

Section 14: Node.js & Runtime Internals

Node.js Event Loop vs Browser Event Loop
Modules (CommonJS vs ES Modules)
Streams and Buffers
File System and Async I/O
Worker Threads and Clustering
EventEmitter and Custom Events

Section 15: System Design & JS Architecture

- Microfrontend Architecture
 - Scalable Frontend Design Patterns
 - SSR, CSR, and ISR (React/Next.js)
 - Caching and API Integration Strategies
 - Error Boundaries and Observability
 - Code Splitting and Lazy Loading
 - Monitoring and Performance Tracking
 - Designing Resilient JavaScript Systems
-

Summary

Category	Sections	Focus
Core JavaScript	1–6	Language, runtime, async fundamentals
Frontend & DOM	7–9	Events, browser APIs, performance
Modern JS	10–12	ES6+, patterns, testing, security
Advanced Engineering	13–15	TypeScript, Node.js internals, architecture
